Essential File and Folder Commands

- `dir`: Lists files and folders in the current folder.
- `cd`: Changes your current folder location.
- `mkdir` or `md`: Creates a new folder.
- `rmdir` or `rd`: Deletes an empty folder.
- `copy`: Copies files to a new location.
- `del`: Deletes files.
- `move`: Moves files or folders to a new location.
- `ren`: Renames a file or folder. [1, 2, 3, 4]

Network and Diagnostic Commands

- `ipconfig`: Shows your computer network and IP address details.
- `ping`: Tests a network connection to another device or website.
- `tracert`: Tracks the path packets take to reach a network destination.
- `netstat`: Displays active network connections and ports.
- `nslookup`: Finds IP addresses by querying the Domain Name System (DNS). [1, 2, 3]

System and Administration Commands

- `tasklist`: Lists all currently running programs and processes.
- `taskkill`: Stops a running program using its process ID (PID).
- `systeminfo`: Displays detailed hardware and operating system information.
- `sfc /scannow`: Scans and repairs corrupted system files.
- `shutdown`: Turns off or restarts the computer. [1, 2, 3, 4]

Here is a list of CMD commands:

Files and Folders Management

MD or MAKEDIR - Creates a folder
COPY - Copies files to another location
XCOPY - Copies files and directory trees

DEL or ERASE - Deletes files
TREE - Shows directory structure of a disk or folder
EDIT - Starts file editor
CD - Changes directory
REN or RENAME - Renames a file or folder
MOVE - Moves files from one folder to another
PRINT - Prints out the text file contents
DIR – Displays files and folders in the current directory
REPLACE - Replaces files in one directory with files of the same name in another directory (overwrite)
FIND - Finds a text string in the file
EXPAND - Decompresses compressed files
ROBOCOPY - Uses an advanced tool to copy files and directories
FC - Compares files and shows the differences between them
RD or RMDIR - Deletes a folder
OPENFILES – Manages opened local or network files
TYPE - Displays the contents of text files

Applications and Processes

TASKLIST - Lists the tasks being performed
TASKKILL - Stops or halts a task (to stop a task you use a PID which you can find out from TASKLIST)
REG – Starts registry editor
RUNAS - Launches the task as another user
SCHTASKS - Executes a command or starts a scheduled application (Task Scheduler)
SHUTDOWN - Shuts down or reboots your computer

Disks Management

CHKDISK - Checks disk and shows statistics
DEFRAG – Starts disk defragmentation
CHKNTFS - Displays or changes execution of disk check at boot
FORMAT - Formats the disk
DISKPART - Displays and adjusts disk partition properties

FSUTIL - Displays and configures file system properties
LABEL - Creates, changes, or deletes a disk volume label
RECOVER - Recovers data from a bad or damaged disk
VOL - Displays volume label and serial number for the disk
CONVERT - Converts FAT disk volume to NTFS
COMPACT - Displays and changes the compression of files in NTFS partitions

System Information

SYSTEMINFO - Shows configuration information about your computer
HOSTNAME - Displays name of the computer
DATE - Outputs or sets the current date
TIME - Displays or sets the system time
DRIVERQUERY - Displays the current state and properties of the device driver
VER - Allows you to view the Windows version
GPRESULT – Displays current applied group policies (RSoP)
GPUPDATE – Updates group policies

Network

PING – Sends ICMP requests to the target host, checks host availability
NSLOOKUP - Finds IP address by resource name
IPCONFIG - Shows information about network interfaces
ROUTE - Displays network route tables
TRACERT - Finds the path for packets traveling over the network
NETSH – Starts network settings control program
ARP - Shows a table with IP addresses converted into physical addresses
GETMAC - Shows the MAC address of the network adapter
TFTP – Starts TFTP client in console

Command Line Setup

CMD - Displays another command prompt
HELP – Launches CMD help
PROMPT - Changes the command line prompt

CLS - Clears the screen
COLOR - Sets the text and background color
TITLE - Assigns a title for the current session
